### **Awite presents: the reusable high-speed fuse AwiProtect.**

Langenbach-Niederhummel, 10th June 2011: With AwiProtect, damages caused by short-circuits and overvoltage belong to the past. The fuse, which by default is an integrated part of all Awite devices, has a fast and reliable reaction time. As soon as the voltage exceeds 27.5 volt or the current exceeds 5 or 10 ampere (depending on the device type), AwiProtect shuts down the device in less than a millisecond. In contrast to most common fuses AwiProtect can be reset, meaning it can be reused once it has been triggered. The current voltage state is indicated by LEDs.

You can count on AwiProtect!
